## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

I. Light transmitting device claims 1 – 42 are drawn to the following species:

Species 1: Claims 2, 3 and 5 – 9, drawn to a light transmitting device having discrete structures of planar layers having a size in one dimension, classified in class 385, subclass 131.

Species 2: Claims 3, drawn to a light transmitting device having discrete filamentary structures having a size in two dimensions, classified in class 385, subclass 123.

Species 3: Claims 4, 10 – 20, 22 – 36 and 38 – 42 drawn to a light transmitting device having discrete structures include grains having a size in three dimensions, classified in class 385, subclass 146.

Species 4: Claims 21 and 37 are drawn to a light transmitting device having discrete structures include grains having a size in three dimensions and the layers in which the dimensions are formed have curved surfaces, classified in class 385, subclass 131.

II. Claims 43 – 52, drawn to an optical module with a photonic chip mounting region and a groove extending forward having an optical coupler, classified in class 385, subclass 28.

Art Unit: 2883

The inventions are distinct each from the other because Invention I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as having utility as an mode strippers by biasing and directing various modes that are separated and coupled together. On the other hand, Invention I operates as an optical waveguide having graded index properties.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 2883

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
